

1. What is the difference between local and global variables?

Answer: A local variable exists inside a function. A global variable is accessible throughout the program.

2. What is the break statement?

Answer: break immediately exits a loop. It stops further iteration.

3. What is the continue statement?

Answer: continue skips the current iteration. It moves to the next loop iteration.

4. What is the pass statement?

Answer: pass is a placeholder statement. It does nothing when executed.

5. What is recursion?

Answer: Recursion is when a function calls itself. It is used to solve repetitive problems.
